Hi everybody,

I would like to help testing the new PhpCollab. And, as I am Brazilian, I could assume the translation to Brazilian Portuguese, if it is desirable.

Feel free to contact me.

Best regards.

For those who are interested in helping us test...

To help test the current version, please download a copy of the application from CVS and then go thru the normal process of creating projects, creating tasks, sub-tasks etc. Try creating, editing, deleting.

Here is a short list of items to be tested:
Client
 - Create
 - Edit
 - Delete

Project
 - Create
 - Edit
 - Delete

Tasks
 - Create
 - Assign
 - Edit (reassign, change status etc)
 - Delete

Support & Discussions
 - Create
 - Reply

Setup
 - Setup process. Any issues using the step by step process to install phpCollab?

Notifications
 - Are they being sent/received? Test with Sendmail and PHP built-in mailer.
 - do you get notifications for the various actions? The default actions are: create task, assign task, task status change, and task priority change.

Databases
 - Test installations on MySQL, Postgresql and SQLServer

OS
 - Test on *nix, windows, Mac, etc environments.

Translations
 - If you speak a foreign language, please review the translations in the ~/languages folder.

Additional info: http://phpcollab.wiki.sourceforge.net/Test+cases

Anything else you think might need to be tested, test it.

Once you have completed any testing, please send me a PM with the detail:

explaining what you tested,

What OS are you using?

What Database? What version?

What version of PHP?

What web server?

Did you encounter any problems? If so, please list them

Let us know if you have any questions.

thanks!

Subject: Re: Testers Needed
Posted by ATi_Guy[TeamATI] on Tue, 07 Aug 2007 07:31:40 GMT

I'm installing the RC when I get up this morning EDT.

Here's the server info:
Apache version 1.3.37 (Unix)
PHP version 4.4.6
MySQL version 4.1.22-standard
Architecture i686
Operating system Linux

We have about 12 projects going ATM and about 30 users. The plan is to get this populated as quickly as possible. We will be utilizing almost every feature to the fullest. Great app BTW.

I would be happy to provide you with admin access so you can poke around if that would help you; just shoot me an email. I know crap about coding so that's about all I can offer. Maybe a video card if you're short.

Also, is there a bridge for integrating the user database with our existing vBulletin install?

Subject: Re: Testers Needed
Posted by ATi_Guy[TeamATI] on Tue, 07 Aug 2007 07:37:55 GMT

One more thing- I'm going to have to make some changes to the team manual for my people that will be using this app. There are some places that are a little unclear.

If you like I can send in my corrections/additions.

Subject: Re: Testers Needed
Posted by frentmeister on Tue, 07 Aug 2007 10:53:16 GMT

We have 50 People here and all using phpcollab, all are Testers now

I think there come a lot of reports, that help phpcol. to make stable

Subject: Re: Testers Needed
Posted by Aracnus on Tue, 07 Aug 2007 20:24:33 GMT

Hi everybody,

I'm testing the CVS version (2.5) on a Debian Testing using:

- Apache 2.2.3-4
- PHP 5.2.0-10
- MySQL 5.0.41a-1

I'm using it with 2 more people and 6 projects. No problems until now...

But there is a little problem on installation. If there is any permission problem and the PhpCollab can't create the configuration file, it prints a message that the creation was ok, but Apache prints, above, the message with an error. I guess it don't verify the possibility to save the file.

Best regards.

ATi_Guy[TeamATI] & any others helping us test...

Please do not install RC3 for testing. Test from the CVS version. There are a lot of fixes in the CVS version that are not in the RC3 release.

If you need help downloading a copy from CVS, send me a PM and I'll walk you thru getting it.

thanks
Jeff

My old CVS guide for windows post appears to have been lost. I'll try and re-write it in the near future.

For the time being, you can install TortoiseCVS and reference this document for help with checking out the project from CVS.

I'm also looking into creating nightly builds to help with testing. I'll keep you informed.

I can put this in production use with 15 users for testing immediatly =)

Hope this helps.

Subject: Re: Testers Needed
Posted by firepol on Wed, 22 Aug 2007 22:24:06 GMT

Hello testers,

I've just tried the last CVS version (checked out on August, 22nd) which is on my opinion stable enough to be advertized, tested and even used (on your own risk). Personally I'll put it very soon in production as I'm using an old 2.5rc3 modifed version...

I've written a CVS guide and created a videotutorial that explains you how to download the last phpcollab version from CVS. The guide is intended for who is afraid to use CVS or is afraid that it's to difficult. It's not. Just read the guide and watch the video here:
http://phpcollab.wiki.sourceforge.net/CVS+checkout

Please give us feedback. If you find bugs report report them in the bug tracker here:
http://sourceforge.net/tracker/?group_id=46510&atid=4463 82

Thank you for your time and patience. phpCollab will come out faster if you help us testing it.

Subject: Re: Testers Needed
Posted by pixelita on Mon, 27 Aug 2007 09:02:02 GMT

Sign me up to test this out. I am currently using PHPCollab 2.4 to manage our web design projects. My clients love it and so do I. Anything I can do to further it along and help it grow, I'm all for it. I can set up a sandbox on my domain mytestbed.com and play with the CVS version there. I'll report back what I find.

Chris

crocco: seems a very interesting list, but please post it in a new thread (this thread is more for us a list of testers and issues about getting the CVS version).

Please note that we can't implement many new features in the upcoming release 2.5. We focus mainly to release it as soon as it's stable enough (which means it can lack some nice new features, but on the other way, all the actual features should work flowlessly).

Your list could be very useful for a new release: 2.6 ... or 3.0.

If you have some specific BUGS of 2.5 CVS version, the perfect place to report them would be the bug tracker on sf.net (is unsure if it's a bug or an issue related to your insallation only: use the forums)

thanks for your feedback

Hi All!

My name is Papp Gergely, I am from Hungary.
I have a team of 6 programmers (HTML, PHP, MySQL, etc.), and we would like to volunteer first as testers.

We are using PHPCollab at a Godaddy host, for working. Found very few bugs till now.

In what we can, and would like to help PHPCollab:
- translate the documentation to hungarian
- write bugs that we found

- advertise PHPCollab to hungarian companies
- help in php coding

Please reply to me for my e-mail address!

didn't bother to look if there's a new version...
I've now downloaded the CVS version and installed it.

If the cvs version is stable as the 2.5rc3 version that i've played with me in the las 30 minutes, then we'll for sure use it.

Thanks!!

Subject: Re: Testers Needed
Posted by firepol on Thu, 18 Oct 2007 08:45:13 GMT

I'm personally using the CVS version in my "prod" environment. I find it personally more "stable" than 2.5rc3.

I don't see blocking errors besides postgres (incompatibilty, syntax errors) that should stop us from from releasing 2.5rc4.

Maybe if all these testers would report the bigger problems or report that everything is working fine we could speed up the release...

Subject: Re: Testers Needed
Posted by mindblender on Fri, 19 Oct 2007 05:16:15 GMT

The CVS version is more stable than RC3. I would highly recommend testing only the CVS version since that will be the next release.

thanks again to all the people who have offered their help in testing. Without the community this project/produt would not be possible. You are what drives us to improve PhpCollab!

Jeff

View Forum Message <> Reply to Message

Hi, I've been using RC3 (with some bug fixes) for couple of years, we have live projects in it - my question is whether the CVS version includes database changes or I can update my RC3 installation simply by overwriting the files (or if there are database changes, is there a database upgrade script on CVS?).

I think phpCollab is still the best project management software of its kind, and I'd very much like to help it moving forward! Thank you guys for a great work so far, I know it's not easy to keep on working on an open source project for so many years, it does not make you rich and many users take it as a freebie without appreciating the effort of the developers or supporting the project/community...

View Forum Message <> Reply to Message

hi,

We're using the svn version, and we have a weird condition where all dates of "Created" and "Assigned" are shown as -
Created : 1969-12-31 16:00
Assigned : 1969-12-31 16:00

I've checked the DB tasks table for this particular task and the dates are correct in the database. This goes for all tasks.
Correct dates in the database table, but everything is shown as "1969-12-31 16:00".

Any thoughts?

Thanks.

Subject: Company Profile page does not refresh properly
Posted by brucew on Sun, 23 Dec 2007 22:00:33 GMT
View Forum Message <> Reply to Message

Hi! I first installed php-collab in 2004 for our still active alliance that works on Community Choice Aggregation in California, USA. CCA is a way for local municipalities to aggregate the purchase of energy instead of giving it all away to private global-opolies.

Since many of us live far away that prevents in-person meetings and so much work, documents, scheduling and committees were needed, I felt a groupware application was definitely needed.

So, we tried php-collab. Unfortunately, it didn't get much use because people didn't see the value at the time to have an all inclusive domain to contain all the work and have it be secured.

Now, they do and we are trying it out again with 2.5RC3.

So, the first bug I found after installation is in the Administration settings for the Company Profile. After saving, the page doesn't refresh back. It just sits there without any confirmation.

Can someone confirm this?

Thanx
Bruce Wolfe

I'm getting the company I work for to use this for project management. We are a graphics design/web design/internet marketing company. We frequently have more than 70 various projects on this go and I thought this system would be great to keep us organized. We currently use constructIT for this, but it costs over $400 a month and gives you limited space for file hosting (like 10GB unless you wana pay extra for another few gigs)

We are absolutely willing to help test this system out.

Just let me know what you guys need on our end. Looking forward to helping make this system even BETTER!

Hi,

I am glad to know that you continue this project. I am interested to help you testing the application.
I am not a developper but I installed phpcollab for my team and we use it to manage internal
projects.

Stephane

May I?
I am 25 year old.

I am interested in Programming, i am using C/C++,C#,Java,ASP.NET,PHP, i want to join the php-collab team.

But i haven't linux env.
it's IIS5.1 + PHP5(ISAPI) + MySQL5, is it suitable?

I'll do my best to know php-collab.
oh, i am Bob

Thanks.~~~

Thanks to everyone who has offered to help test.

For those who have been testing, please post any bugs you find in our bug tracker at:
https://sourceforge.net/tracker/?group_id=46510&atid=446 382

Development is still going on, albeit slowly, but it is still going. I am hoping to have the 2.5 final release out this summer once my current workload lightens up a bit.

Thanks again for your continued support and please keep the bug reports coming in so we can make this a great product.

Jeff

I would like to volunteer as a tester. In fact, I'm going to start testing it for our client. We do creative projects and I see this application perfect for the job. I'll take it for a spin.

Hi, I'd like to test phpcollab on myown behalf.
Wish I could help.

hi there, i've installed current phpcollab 2.5
and i'm willing to help bug reporting.
i have a small team (<10ppl)
and the server is a centos 5.1 machine.

so far i've found one prolem:
when i edit a project's task,
several blank spaces are getting inserted before the task name in the input field.

(please see attached screenshot)

tnx for making phpcollab

```

Try installing the CVS version. The issue of extra spaces has been fixed.

For all of those that have volunteered to help with testing, we thank you.

Any testing that you are performing or are interested in doing should ONLY be done on the CVS version. It is the most recent version.

Please keep letting us know about any issues that you find while using php-collab. Please enter any bugs you find in our bug tracking site: https://sourceforge.net/tracker/?group_id=46510

Please put any support requests in the Support forum,
http://www.php-collab.com/community/index.php?t=thread&f rm_id=8

Thanks,
Jeff

Sorry guys but I finally decided to use dotproject instead of phpcollab.

Good luck for the future!

Hi all,

I'm starting now with PHPCOLLAB as user and I'm interested to be tester of this project programm.
I'm project leader in my company so I'm used to working with project programs...

 Regards

 Didier

I would be interested in assisting in the development. I am a director of a very large non-profit
organization, act as the web services director. Many years with Windows and recently started
using Ubuntu Linux and created a PHP Forum... I have been looking into PMWiki and noticed this
which looks interesting enough to offer any assistance I may be in the development stage.

Thanks
